

Compliance

Sustainability along the supply chain

btv technologies gmbh can be described as an SME. Nevertheless, with the definition "small and medium-sized enterprise" a lot can be done.

btv technologies gmbh offers customers from all over the world comprehensive and high-quality services for electronic components. As an innovative system provider in the competence area of electronic components, we work in partnership with leading market players. Especially for our customers from the automotive industry, we are an integral part of the supply chain and guarantee on-time supply by semiconductor manufacturers worldwide.

State-of-the-art technologies for highest demands
Maximum flexibility and diversity in the programming of electronic components - these are just some of the decisive advantages for the customers of btv technologies.

btv technologies guarantees 100% traceability - regardless of whether programming is used with other services or as a stand-alone.

Step by step, our services bring building blocks to life and supply our customers and their production sites worldwide with our supply chain services.

As a "non-manufacturer" of products, btv technologies gmbh has decided to work together with other companies affiliated with the NIRO network (Netzwerk Industrie RuhrOst) from the fall of 2023 in order to be able to prepare a first sustainability report for btv in accordance with the DNK standard (German Sustainability Code).

The GSC is suitable as an instrument for the development of a sustainability strategy and offers btv technologies gmbh an introduction to sustainability reporting.

From our point of view, btv technologies gmbh can contribute significantly with its supply chain services to support our customers along the supply chain in CO2 footprint reduction efforts. We want to help to reduce the respective CO2 footprint by consolidating the supply routes.

After such a first sustainability report, btv technologies gmbh plans in the next step to develop further requirements for transparency, in order to be able to realize assessments on the topics EcoVadis, and CDP Rating. More about the services of btv and about our Code of Conduct can be found on our website at:
